

Firefighter Safety & Survival: RIT Technician Skill Sheet

Candidate: _____ **Date:** _____

2-1 & 2-2 Lost Firefighter Drill					
No.	Task Steps	<u>First Test</u>		<u>Retest</u>	
		Pass	Fail	Pass	Fail
1.	Candidate recognizes that he/she is lost or disoriented (verbalizes to proctor).				
2.	Candidate notifies command on radio of situation, using proper mayday procedure for their department.				
3.	PASS device is activated after mayday communication.				
4.	Candidate orients themselves to area, attempts egress.				
5.	Candidate maintains radio contact if possible, reports position, significant landmarks, and hazards.				
6.	Candidate reports any secondary egress/escape routes found. (Note: for the purpose of the drill, the proctor may choose to recognize secondary egress/escape routes, then have the candidate proceed as if they did not exist)				
7.	Candidate monitors SCBA air supply, notifies command or rescue branch when necessary.				
8.	Candidate marks position by banging the wall, floor or other applicable surface when necessary.				
9.	Candidate continues egress attempt until: <ul style="list-style-type: none"> Candidate reaches safe area. Rescuers find candidate and remove them to safe area. Candidate can proceed no further, and chooses to mark their position and report it to command. 				
RETEST APPROVED BY: _____		RETEST EVALUATOR: _____			

Grading Criteria: All above task steps must be completed.

2-4 Wall Breach					
No.	Task Steps	<u>First Test</u>		<u>Retest</u>	
		Pass	Fail	Pass	Fail
1.	Suitable wall for breaching identified.				
2.	Tool used efficiently.				
3.	Secondary wall surface removed efficiently.				
4.	Entanglement hazards identified and removed.				
5.	Wall stud displaced as needed.				
6.	Movement through new opening negotiated.				
7.	Use of SCBA for breaching tool demonstrated (Optional).				
8.	SCBA mask seal maintained at all times.				
9.	All required low-profile SCBA maneuvers completed correctly.				
10.	SCBA re-donned and adjusted after removal.

Date: _____

2-7 SCBA Low Profile Maneuvers					
No.	Task Steps	<u>First Test</u>		<u>Retest</u>	
		Pass	Fail	Pass	Fail
1.	Sizes up egress opening.				
2.	Lengthens SCBA waist strap.				
3.	Removes SCBA waist strap, if appropriate.				
4.	Loosens shoulder straps.				
5.	Shifts SCBA down and under appropriate arm.				
6.	Removes SCBA and secures for head or feet first egress.				
7.	Maintains positive control of SCBA at all times.				
8.	Maintains mask seal at all times.				
9.	Transits egress opening while maintaining control of SCBA.				
10.	Re-dons SCBA shoulder straps and adjust for fit.				
11.	Re-dons SCBA waist strap and adjusts for fit.

2-8 Ladder Bail Technique					
No.	Task Steps	<u>First Test</u>		<u>Retest</u>	
		Pass	Fail	Pass	Fail
1.	Need for emergency ladder egress identified.				
2.	Low profile maintained during window exit.				
3.	Reaches under the second rung with right arm and under hand grasps third rung, or the right-hand beam of the ladder.				
4.	Slides left arm down the left ladder beam to the fourth rung, never losing contact with the beam.				
5.	Grasps the fourth rung and positions left hand for pivoting.				
6.	Bends legs at the knees and pivots lower body to the left and out of the window.				
7.	Swings lower body into contact with the ladder.				
8.	Places feet onto ladder, ensures four point contact.				
9.	Performs maneuver in controlled fashion.				
10.	Climbs down ladder – OR -				
11.	Performs ladder slide if conditions warrant

2-9 Window Roll-Out (OPTIONAL)					
No.	Task Steps	<u>First Test</u>		<u>Retest</u>	
		Pass	Fail	Pass	Fail
1.	Need for emergency egress is identified.				
2.	Window is completely cleared of glass and entanglements.				
3.	Outside arm and head are placed outside of the window, arm maintaining contact with outside wall.				
4.	Outside leg and torso are positioned outside of the window.				
5.	Inside arm and leg maintain contact with inside wall.				
6.	Exposed body surface area is minimized.				
7.	Low profile is maintained at all times.				
	<i>Conversion to Hang & Drop</i>				
8.	Outside hand is moved back to windowsill.				
9.	Inside leg is moved to exterior, body is supported by both hands gripping the sill.

2-11 SCBA Confidence Course Drill Skill Objective 2-3 and 2-6 may be incorporated in this skill evaluation.					
No.	Task Steps	<u>First Test</u>		<u>Retest</u>	
		Pass	Fail	Pass	Fail
1.	Team integrity is maintained at all times.				
2.	Team members communicate with each other.				
3.	Hazards are identified and negotiated.				
4.	Secondary egress/escape routes identified.				
5.	SCBA integrity is maintained at all times.				
6.	Significant landmarks are marked and communicated between team members.				
7.	Identified escape route (such as hose line) secured and followed.				
8.	Radio communication established and maintained, if applicable.				
9.	All team members continue until complete team egress is achieved.

Date: _____

4-1 Approaching Downed Firefighter					
No.	Task Steps	<u>First Test</u>		<u>Retest</u>	
		Pass	Fail	Pass	Fail
1.	Victim is located and identified.				
2.	Victim's body position identified.				
3.	Victim positioned for assessment and removal.				
4.	Level of consciousness assessed.				
5.	SCBA air supply assessed.				
6.	SCBA mask seal and positive pressure flow assessed.				
7.	Supplemental air supply attached.				
8.	Entanglement and trapping hazards assessed.				
9.	Victim's condition communicated to IC or RIT group supervisor (LUNAR).				
10.	Actions for victim removal initiated (Victim removed if resources allow, defensible space created if immediate removal is not possible).				
11.	Items 1 – 6 completed in a timely manner

4-2 and 4-3 Firefighter Rescue Drags					
No.	Task Steps	<u>First Test</u>		<u>Retest</u>	
		Pass	Fail	Pass	Fail
1.	Victim positioned for removal.				
2.	SCBA shoulder straps adjusted for victim removal.				
3.	SCBA waist strap repositioned to prevent displacement. (Converted to a "Harness").				
4.	Rescuer(s) at the victim's head uses SCBA shoulder straps or suitable method for movement of the victim.				
5.	Rescuer at the victim's feet (if applicable) places the victim's leg(s) on their shoulder(s) (Note: the rescuer's shoulders should be positioned as low as possible – between the victim's knees and buttocks).				
5a.	Wide spaces use side by side technique. (one FF on each side of victim, grasping each SCBA shoulder strap)				
5b.	Single firefighter positions ahead of downed firefighter, pulls with SCBA strap or rescue strap. Downed firefighter is pulled on SCBA bottle.				
6.	Victim moved in coordinated effort.

4-4 Firefighter Ladder Rescue					
No.	Task Steps	<u>First Test</u>		<u>Retest</u>	
		Pass	Fail	Pass	Fail
1.	Window cleared of all obstructions.				
2.	Victim moved to window for removal.				
3.	Victim positioned for removal.				
4.	Ladder and Rescuer on ladder positioned for receiving victim.				
5.	Face up removal – Victim’s SCBA removed.				
6.	Face up removal – Victim moved to seated position on window sill.				
7.	Face up removal – Victim’s knees positioned on ladder rescuer’s shoulders. Ladder rescuer grasps the beams of the ladder, placing victim in cradle position.				
8.	Face up removal – Ladder rescuer moves down the ladder, keeping victim centered between beams.				
9.	Face up removal – Ladder rescuer demonstrates method for maintaining victim control (pins victim between themselves and ladder).				
10.	Face down removal – (SCBA may be left on) Victim’s feet placed out the window, to one side of the ladder.				
11.	Face down removal – Ladder rescuer positions victims legs over the ladder beam, placing arm between the victims legs and grasps the ladder beam.				
12.	Face down removal – Ladder rescuer places their other arm under the victim’s lowest armpit and grasps ladder beam.				
13.	Face down removal – Ladder rescuer moves down the ladder, keeping victim centered between beams.				
14.	Face down removal – Ladder rescuer demonstrates method for maintaining victim control (pins victim between themselves and ladder) .

4-7 Nance Drill (Incorporates Objective 4-6)					
No.	Task Steps	<u>First Test</u>		<u>Retest</u>	
		Pass	Fail	Pass	Fail
1.	Opening identified and sized-up.				
2.	Area around opening reinforced for rescuers.				
3.	Handcuff knots correctly tied and placed in rope.				
4.	Haul team positioned at corners of the opening.				
5.	Rescuer places foot in handcuff knots for lowering.				
6.	Rescuer maintains contact with ropes while being lowered.				
7.	Haul team lowers rescuer in controlled fashion.				
8.	Rescuer positions victim for removal.				
9.	Rescuer attaches ropes to the victim.				
10.	Rescuer signals haul team for victim removal.				
11.	Rescuer guides victim through opening throughout lift.				
12.	Haul team removes victim to safe area.				
13.	Haul team removes ropes from victim, lowers rope back to rescuer for removal.				
14.	Rescuer places foot in handcuff knots for lifting.				
15.	Haul team removes rescuer to safe area.

4-8 Denver Drill					
No.	Task Steps	<u>First Test</u>		<u>Retest</u>	
		Pass	Fail	Pass	Fail
1.	First rescuer proceeds to feet of the victim.				
2.	Victim is placed in supine position.				
3.	Victim's SCBA straps are secured for use as a harness, time permitting.				
4.	First rescuer positions victim for second rescuer's entry.				
5.	Second rescuer positions under the window, facing first rescuer.				
6.	Second rescuer places his/her legs to form a ramp.				
7.	Second rescuer grasps bottom of victim's SCBA bottle for lifting.				
8.	First rescuer moves victim in a coordinated effort with second rescuer, placing victim as high as possible on second rescuer's legs.				
9.	First rescuer positions under victim, with victim's legs on his/her shoulders.				
10.	Second rescuer maintains position under the victim, lifting by the SCBA bottle up, over and out.				
11.	Both rescuer's move victim up and out window in a coordinated effort to third rescuer waiting outside.				
12.	Third rescuer grasps victim's SCBA shoulder straps and removes victim out of the window in a controlled fashion.				
13.	Rescuers maintain low profile on entry and exit .
